Experiment -2

Aim

Identify the system calls to copy the content of one file to another illustrate the same using C Program

Algorithm

* Include headers stdio.h, fcntl.h, unistd.h.
* Declare variables for file descriptors and buffer.
* Open source file using open() in read mode.
* Open destination file using open() in write mode
* Use read() to read data from source into buffer.
* Use write() to write data from buffer to destination
* Repeat until end of file
* close both files using close().

Results.

The Program to copy the content of one file to another was successfully executed.
